Director and the holding of a major technical day focused on the management of operational reinforcements via the Future Radio Network (Réseau Radio du Futur – RRF).

By decree of the President of the French Republic dated 17 April 2026, Rémi de Gouvion Saint-Cyr was appointed Director of ACMOSS with effect from 1 May 2026. A Colonel of the French National Gendarmerie and a graduate of the Saint-Cyr Coëtquidan Military Academy, the new Director brings extensive experience within the Ministry of the Interior, having most recently served as Director of Security and Architecture at the Digital Agency for Internal Security Forces (ANFSI). His mission at ACMOSS will be to continue the operational deployment of the RRF, with the objective of reaching more than 300,000 users by 2029, while ensuring the permanent operation of the network and preparing its future technological evolutions.

> *"It is an immense honour for me to join ACMOSS as Director. The Future Radio Network is transforming the critical communications of France's security, emergency and healthcare services. Together with the agency's teams and the user services, we will rise to these challenges with rigour and a strong sense of the public interest," declared Rémi de Gouvion Saint-Cyr.*

Just days after this appointment, ACMOSS hosted a technical day dedicated to the management of operational reinforcements, held on 5 May 2026 at the SDIS of Bouches-du-Rhône in Marseille. The event brought together stakeholders including the Directorate General for Civil Security and Crisis Management, the Marseille Naval Fire Battalion, the South-East Interministerial Defence and Security Zone Headquarters, the Civil Security Digital Agency (ANSC), and Airbus, the industrial partner of the RRF. Numerous SDIS — including those of Oise, Rhône, Alpes-Maritimes, Loire, Haute-Savoie and Gironde — also took part, alongside the Civil Security Military Brigade (BMSC).

The day showcased the latest developments of the RRF, with particular attention paid to interoperability, integration into Operational Management Systems (SGO) and the work linked to NexSIS. Use cases tested the
